CAD Overview

These CAD standards were developed to aid engineers, designers and draftpersons in producing plans for construction within the City of Lake Oswego. They are intended to provide a coordinated, uniform and economical system for preparation of sanitary sewer, storm drainage, water and street construction plans.

We appreciate your undertaking a partnership with us in this endeavor. We hope that these CAD standards will prove useful and helpful in producing construction plans.

Sincerely,

Guy R. Graham, P.E. Public Works Director/City Engineer
