

Water

The City of Lake Oswego operates and maintains a Water Treatment Plant in West Linn, as well as a distribution system, a water conservation program, and a cross connection control program.

Water plays a vital role in everyone's life. The Water Department's mission is to bring healthy drinking water of the highest quality to Lake Oswego's residential and wholesale customers from our intake facility on the Clackamas River in Gladstone.

[Backflow and Cross Connection Control Program](#)

As required by the Oregon Health Division, the City of Lake Oswego has developed a cross connection control program. Its purpose is to protect the public water system as well as the citizens' private water system from possible contamination, and provide the best possible water quality.

- [Lake Oswego Tigard Water Partnership](#)

Lake Oswego's key water supply facilities – the water intake on the Clackamas River and the water treatment plant in West Linn – are more than 40 years old. Over the years the City of Lake Oswego has continued to invest in its water supply system through upgrades, replacements, and maintenance. This has allowed the City to keep water rates low.

- [Odd Tasting, Odorous, or Colored Water](#)

If you are experiencing odd tasting, odorous, or colored water there are basically two causes that could be occurring:

- A problem with the City of Lake Oswego source water.
- An interaction of disinfection agents with a build-up of organic material in your home's plumbing system.

[Water Quality and Treatment](#)

The City of Lake Oswego treats water by pumping raw (river) water from our Clackamas River intake at Gladstone, under the Willamette River to the Treatment Plant in West Linn. When the water reaches the plant it receives doses of chemicals that help to make it safe. Chlorine is added to begin the process of disinfecting the water. Alum (aluminum sulphate) is the primary...
