

LOIS Information Session - West End

May 27, 2009

loisnews.com

The LOIS system will replace the interceptor sewer line, the backbone of the City's wastewater system located in Oswego Lake.

Replacement of the interceptor is critical to ensuring the environmental protection of Oswego Lake and maintaining wastewater service for residents.

The existing interceptor is undersized, resulting in overflows during heavy rains, and is vulnerable to earthquakes.

CONSTRUCTION IN THE LAKE OVERVIEW

Over the next two months, you will begin to see LOIS construction teams on Alder Circle, Lakewood Bay, and the "East Arm" of the lake. Two homes on McVey next to Oswego Lake Dam will be deconstructed to make room for a crane and large dock. On Lakewood Bay, workers on barges will reinforce existing manholes to increase their life spans. Pipe fusing will begin from the dock near Oswego Lake Dam in the fall.

Equipment similar to this barge and crane will appear on the lake in coming months.

Construction begins at Alder Point easement.

Mobilization efforts begin at Alder Circle this week. This phase involves clearing some shrubbery, removing the fence and platform, installing a gate, and laying down rock for erosion control. A mini-causeway or rock pier will be built at the site and a crane will be brought in to load drill rigs on barges. The barge crew will begin drilling in mid-June and will make their way East along the new pipeline route.

This September, you will see a micro-piling barge in West Bay. Work on the pile-supported pipeline in the west end will continue through December.

ADVANCED AMERICAN CONSTRUCTION IS "LAKE FULL" CONTRACTOR

Based in Portland, AAC has provided marine construction, diving, and industrial services throughout the western US since 1983. AAC has provided barges for the annual Lake Oswego 4th of July fireworks display for years.

Barge sizes in comparison to a football field.
