

Senior Scholars Program • Misinformation in the Digital Age

Wrong
by Dannagal G. Young
Political leaders and media organizations capitalize on our social and cultural identities to separate us. This drives our belief in and demand for misinformation. *Wrong* shows us how to reverse this dangerous trend.

The Death of Truth
by Steven Brill
Best-selling author Steven Brill document the forces and people that profit from chaos and division, and lays out a series of provocative but realistic solutions to restore the trust necessary to bring us together.

Misbelief
by Dan Ariely
Grounded in years of study as well as his own experience as a target of disinformation, a preeminent social scientist explores the psychological drivers that cause otherwise rational people to adopt deeply irrational beliefs.

Building Back Truth in an Age of Misinformation
by Leslie F. Stebbins
A look at how to build back truth online by repairing our existing social media platforms to strengthen community ties and promote access to trustworthy information.

Data Duped
by Derek W. Gibson
Numbers can be used to manipulate our decisions and impact our lives in surprising ways. Build "data defense" by learning what types of questions to ask to develop a healthy data mindset.

The Skeptics' Guide to the Universe
by Steven Novella
Based on the podcast known for battling sloppy reasoning, bad arguments and superstitions with logical thinking, the "Skeptical Rogues" help readers try to make sense of an increasingly crazy world using critical thinking skills, science, and philosophy.

Bullspotting: Finding Facts in the Age of Misinformation
by Loren Collins
Discover ways to use critical thinking skills to spot the common trends in misinformation campaigns including conspiracy theories, hoaxes, and pseudoscience.
