DO I NEED A PERMIT? (COMMERCIAL, INDUSTRIAL, PUBLIC, AND MULTI-FAMILY)

This guide is intended to answer frequently asked questions about building and planning requirements in the City of Lake Oswego for development other than single-family or middle housing. If you have more questions relating to your particular project, please contact the Planning and Building Services Department at 503-635-0290.

ERECT A SIGN? Probably. Most signs need a Sign Permit through the Planning Department, although certain small incidental signs do not. Please see the Sign Overview handout for a brief description of signage and sign permits. Please note that A-frame or "sandwich board" signs are not allowed as permanent, temporary, or incidental signage in non-residential zones.

PAINT MY BUILDING? Possibly, depending on when the building was constructed and what type of Planning review it received at that time. In general, the following review is required:

- (1) If a building went through a land use approval process (typically called Development Review or DR for short), and color was analyzed as a part of that review, new paint will require a DR Modification (DR Mod) permit through Planning. However, if the new paint is similar in color and tone to the old paint, a DR Mod may not be necessary.
- (2) If a building went through DR and there was no discussion of color anywhere in the record, a permit from Planning is not required.
- (3) If a building did not go through DR, a permit from Planning is not required.

Please contact the Planning and Building Services Department for more information on a particular site.

RE-STRIPE MY PARKING LOT? No permit is needed to restripe a parking lot; however, there are specific stall and aisle width requirements based on the angle of the parking stall, and restriping can't result in a loss of parking spaces below the minimum number required, parking that is more than 125% of the minimum required off-street parking, or more than 50% of the required parking in compact spaces. Please note that if any existing landscaping is proposed to be removed in order to provide more on-site parking spaces, a DR permit may be required; inquire with the Planning Department. Please see LOC 50.06.002 for more information on parking requirements.

CHANGE THE USE IN A BUILDING? Possibly. Different businesses generate different parking and loading demands; the Development Code lists the required parking and loading requirements for most commercial and industrial uses [LOC 50.06.002]. If you can show that you can provide all of your required parking on the site, no permit will be required. However, a Change of Use permit is necessary if the increased parking need can only be met through a shared parking agreement or a parking study. A

Change of Use permit will also be required when there is an increase in loading requirements, a change in access requirements, or the construction of private streets or driveways. In the Downtown Redevelopment District, due to the availability of on-street parking and transit, there are exceptions to minimum parking that apply in certain areas [LOC 50.05.004.9]. Please see the Change of Use handout for more information.

MAKE TENANT IMPROVEMENTS? Yes, tenant improvements (TIs) require permits from the Building Division. In addition, if exterior changes to the building are proposed, a DR permit through Planning may be required. For buildings that previously went through the DR process, exterior changes typically require a DR Modification permit. For buildings that did not go through DR, a permit is typically required if (1) more than 25% of any façade is altered, (2) the property abuts a residentially-zoned property, or (3) the modification is visible from residentially-zoned property. Please contact the Planning and Building Services Department for more information on a particular site.

REMOVE A TREE? Yes. All trees greater than six inches in diameter (measured at 4.5 feet above the ground) require a permit for removal. For each tree removed under a Type II tree removal permit, a mitigation tree will be required to be planted on the property. Please see the Tree Removal Guide for more information on the tree removal process.

REMOVE OR CHANGE LANDSCAPING, OR REMOVE A TREE LESS THAN 6 INCHES IN DIAMETER?

Possibly. Non-residential properties must provide a minimum 15-20% of the site as landscaping. Additionally, if a property went through the DR process, the placement (street trees, for example) and composition of the landscaping was likely approved in that review process. Please contact the Planning and Building Services Department for more information on a particular site.

ERECT A STORAGE SHED OR OTHER ACCESSORY STRUCTURE? Possibly. Accessory buildings that are exempt from Building permits based on their size are also generally exempt from Planning review. Accessory buildings that require Building permits also require a DR permit. Please contact the Planning and Building Services Department for more information on the review process, and the Building Division for permit requirements.

ADD OR REPLACE A HVAC UNIT? Yes, a Building permit is required for adding or replacing an HVAC or similar unit on the site. If the unit is located on the roof, please provide Planning with photos and a roof plan showing the view of the roof and unit from the street level or parking lot. If the unit is generally visible from the street or parking lot, appropriate screening will be required even if it is a replacement unit. Screening is required for ground mounted units, unless they are placed in a location that is not visible. Please see the Mechanical Permit handout for more information.
