The Lake Oswego 2010 Century Tree Project celebrates the City's oldest living residents and their contributions to the City including visual beauty, a living connection to our past, and environmental services such as stormwater interception and carbon dioxide absorption. As part of the City's centennial celebration, citizens were invited to nominate trees that they believe could be one hundred years or older. Nominated trees were visited by an ISA Certified Arborist and 47 trees were identified as having achieved Century Tree status, either through core sampling or historic documentation. The Century Tree Map illustrates the location of each Century Tree and includes a data table and picture collage. Just think how much fun the community will have 100 years from now revisiting these living legacies!
